

Recent CDC data reveals 85% of COVID-19 patients had “always” or “often” worn a cloth mask or face covering in the 14 days preceding their illness.”

Does that sound to you like they prevent “disease”?

1. According to the latest immunological and serological studies, the overall lethality of Covid-19 (IFR) is at most 0.1% and thus in the range of a strong seasonal influenza (flu).
2. Up to 80% of all test-positive persons remain symptom-free. Even among 70-79 year olds, about 60% remain symptom-free. Over 95% of all persons develop mild symptoms at most.
3. The median or average age of the deceased in most countries (including Italy) is over 80 years and only about 4% of the deceased had no serious preconditions.
4. An article in the *New England Journal of Medicine* from May 2020 also comes to the conclusion that respiratory masks offer little or no protection in everyday life. The call for a mask requirement is described as an “irrational fear reflex”.
