

Dear friends of the Germanische Heilkunde,

Our world today is in turmoil, and fear is pervading our daily lives.

Dear friends, you who know the Germanische Heilkunde, rest assured. Viruses are our allies.

So-called viruses are not living creatures like microbes (e.g. bacteria) - they are free of micro-organisms.

So-called viruses are a postulate from the time when only very bad microscopes were available, 150 years ago. They are not visible under a microscope. The assumption that they cause "disease" is false. They assist in tissue regeneration by filling ulceration cavities made during the active phase of the conflict, affecting ectodermal tissue. School medicine has never verified this to date.

So-called viruses are antibodies that are provided by our brain as a companion rail during DHS, which become visible and measurable, organically, as antibodies, only from the solution phase where inflammation occurs. This is due to the proteins that fill the ulceration cavities made during the active conflict.

The tests measure the level of antibodies. If the result is positive, then people are protected, immune.

A few years ago, Dr. Ryke Geerd Hamer predicted that a bacteriological disaster would occur in Europe and around the world. He was right.

The separations we are currently experiencing are causing conflict and some people who are denied family visits may die of grief.

On the other hand, fear (fear of not being able to breathe, fear of running out of air or even of dying) causes what are called "round spots on the lungs". These spots correspond to an increase in the pulmonary alveoli, which makes biological sense during the active phase of the conflict, in order to have more air and breathe better.

Dear friends, let us remain united, let us live these difficult moments in discernment and serenity.

Thank you, dear Geerd, for this great discovery that allows us to understand and therefore not be afraid.

March 22, 2020,

Andrée and the friends of the Germanic
